Global Leader for over 45 Years

tion, development and manufacture of laser systems.

# All In-house Technology

To fulfill market needs and maintain a short time-to-market Fotona invests in outstanding manufacturing and R&D

# **Global Network of Experts**

Since 1964 Fotona has set industry standards of excellence Our global network of Fotona representatives and partners in laser systems for medicine, communications, industry, brings together the most capable and experienced laser and defense. Our laser systems are the result of over 45 experts in the world. By developing and nurturing close years of experience and expertise in producing high tech relationships with our partners, we ensure that our proproducts for these respective fields. Consequently Fotona ducts and services fulfill the most current market needs. is a globally recognized leader and pioneer in the innova- Through our global Fotona network we guarantee exceptional customer service, support and training.

## Choose Fotona, Choose Perfection

Choosing Fotona ensures innovative solutions, superior performance capabilities, technical perfection and unrifacilities. In-house manufacturing and stringent testing valled clinical results. Achieving unmatched levels of preciof all our systems' components, in compliance with all sion, efficacy, efficiency and safety are key to the success of applicable international standards, ensures that our laser our laser systems. When you choose Fotona, you choose the systems are of the highest quality, reliability and durability. highest performance, best made laser systems in the world.

# Be an artist of the new

# **Next Generation Multi-App Laser Workstations**

#### • New Generation Resurfacing

Skin rejuvenation is a fast growing and competitive treatment segment. Meeting patient expectations has become exciting and novel approach in skin anti-aging and aesthea true artform. With advanced attributes and fully customizable settings, Fotona's SP Dynamis and SP Spectro systems offer true 3<sup>rd</sup> Generation Er:YAG laser skin resurfacing. Like using an artist's palette, you can precisely mix and match cold ablation and thermal effects to achieve perfect results.

#### • Highest Performer in Popular Aesthetic Treatments

Nd:YAG certainly needs no introduction as the gold standard in hair removal, rejuvenation, acne and vascular treatments, and much more. S-ll Nd:YAG scanner compatibi-

efficiency, especially in large areas. With an extra Accelera Nd:YAG function you can now offer FRAC3® – the latest

#### • Inside-to-Out Anti-Aging

Combine skin treatments with lucrative, minimallyinvasive surgical treatments including laser lipolysis. The SP Dynamis and SP Spectro\* are equipped with a powerful surgical QCW Nd:YAG laser for fast and efficient procedures. Its wavelength is proven to show exceptional efficacy and significantly reduce recovery times in procedures. Unlike other laser workstations on the market, the SP Dynamis and SP Spectro allow you to provide patients with antility further enhances these treatments in speed, safety and aging treatments that are truly from the inside-to-out.

# A Laser Workstation for Every Practice

Fotona offers one of the most extensive lines of laser systems in the industry; there is a laser system to suit every practice's needs and budget. For more information on the complete line of Dynamis and Spectro laser systems, visit www.fotona.com or contact your local Fotona representative.

# **Unprecedented Full-Field Ablation Options**

#### • More Control than Ever Before

Full-field ablation has been the mainstay for master artists in skin resurfacing for many years. It remains the most efficient and effective to achieve dramatic results. Now S-Runner computer-controlled scanning offers you unrivalled accuracy and control in treatments.

#### • Discover the Other Side of Ablation

Combined with SP Dynamis' and SP Spectro's supporting technologies, S-Runner scanning offers an extraordinarily wide variety of treatment options. In the ablative range, treatments can extend from Light Peels to Deep Peels. In the thermal regime, options range from Non-ablative Thermal with exclusive V-Smooth Technology to Medium Thermal supported by TURBO technology.

#### • More Intense Deep Collagen Remodeling

V-Smooth Technology sets the SP Dynamis and SP Spectro in a class apart from other resurfacing technologies available today. Their extreme skin-coverage speeds at longer pulse duration times provide more effective and controlled skin coagulation. V-Smooth treatments induce more intense deep collagen remodeling; ideal for patients who want drastic rejuvenation effects but are not inclined towards aggressive ablative treatments.

# Fractional Scanning Accelerates Recovery

The art of skin rejuvenation is balancing treatment intensity with acceptable patient downtime. F-Runner fractional scanning, combined with the treatment control features of the Dynamis and Spectro systems, allow you to set that perfect balance. The F-Runner ablates microndiameter channels over just a fraction of the entire resurfacing area. This initiates a wound healing response which stimulates fibroblasts to produce new collagen and elastin. The surrounding and intact skin tissue further promotes rapid healing.

Maximum Results within Patient Downtime Limits

#### Unrivalled Accuracy and Uniformity

F-Runner fractional scan treatments increase general skin thickness and turgor to provide a healthy look and feel to the skin. They provide excellent patient comfort with faster healing times, and can be tuned to produce subtle to dramatic results. Large-area procedures will dramatically benefit from the unrivalled accuracy and uniformity that only computer-controlled scanning can ensure.

## Patients report that their skin feels more elastic, bouncy and generally younger after FRAC3® treatments. For many practitioners such treatments are ideal offerings to help patients feel great before an important social

The SP Dynamis and SP Spectro include Accelera Nd:YAG to provide faster healing than in conventional fractional popular non-ablative aesthetic treatments.

laser technology that generates extremely short Nd:YAG treatments, which remain limited to a two dimensional pulses while maintaining clinically effective power levels pattern. With FRAC3®, treatment intensity is minimized to provide FRAC3® skin rejuvenation and many other while efficiency is maximized in the non-ablative aesthetic treatment range.

A revolution in aesthetic laser treatments – FRAC3® pro- The FRAC3®' fractional effect can be applied to enhance duces a unique, self-induced 3D non-ablative fractional almost any non-ablative treatment, principally skin rejueffect as it seeks out minuscule, pigmented imperfections venation, hair removal and vascular treatments. Fast and in the skin. Thanks to its three-dimensional treatment concrete results, minimal downtime and selective tarpattern, more surrounding tissue remains unaffected geting are key characteristics in the FRAC3® treatment

# **High-Definition Fractional Treatments** with TURBO Technology

TURBO mode is another unique technology feature. "Turbo" sequences of identical pulses emitted within the and create more accurately and sharply defined microchannels than with single pulses of equivalent fluence. TURBO Technology will allow you to adopt and capitalize on a true "less is more" strategy, by getting the most out of even the most conservative treatment settings

advanced laser technology. This avoids

TURBO mode micro-channel contours (right) are distinctly energy single pulses (left).

# S-Runner

Computer-Controlled Full-Field Scanning

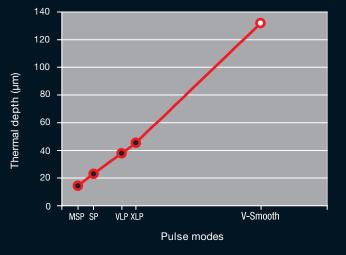

- 4x4 cm maximum scan area
- 4 mm spot size
- 0% to 30% overlap
- Up to 470 µm ablation depth per scan
- Fully adjustable scan pattern
- OPtimal, PaRtial and SEquential scanning
- TURBO mode and V-Smooth compatible
- Ergonomic and functional design

# V-Smooth Technology

New Long Pulse for High-Speed Coagulation

V-Smooth, or Variable Smooth, is a novel modality for high thermal, minimally ablative skin rejuvenation treatments that induce collagen remodeling. V-Smooth is based on specially-developed scanning speed enhancing solutions unique to S-Runner. V-Smooth Technology ensures complete accuracy and unparalleled simplicity by targeting to conventional pulse duration modes (dark)

and irradiating individual spots for an optimal time, and returning to the same spots at computer-controlled interaccuracy and efficacy, patient safety and comfort are thus maintained. Its featured 100 ms to 500 ms variable pulse duration range extends the variable coagulation depth range, to enable you to fine-tune treatments. V-Smooth even allows for ablative and deep thermal effects within a

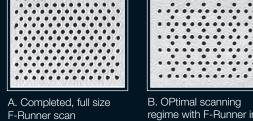

# F-Runner

**Computer-Controlled Fractional Scanning** 

- Sharp fractional treatments
- 250 µm microspot size
- <5 μm to 1100 μm micro-channel depths</p>
- Adjustable scanning field coverage
- 168 mm² maximum scan area
- CRYstal and NATural scanning
- TURBO technology compatible
- Ergonomic and functional design

Computer-controlled scanning in combination with ergonomicallyadjusted and functional design provide levels of procedure accuracy and uniformity unattainable by any other technological
